ABOUT US

PRODUCTION AND TECHNOLOGY

WHERE WE SELL

-  BRAVO
-  COMENSAL
-  PAINTING TOOLS
-  TILING TOOLS

Key to symbols:

-  - new product
-  - made of stainless steel
-  - specialized tool
-  - patent pending
-  - innovative technologies applied
-  - eco-friendly design

Comensal Sp. z o.o. is one of the leading producers of building hand tools in Poland. Since 1992 we have been broadening our experience in the production of building hand tools and establishing our market position.

We particularly focus on the quality of our products and the satisfaction of clients. Due to constant investments in innovative manufacturing technologies and warehouses we still increase our production effectiveness and improve delivery standards.

We are proud to supply not only DIY chain stores, distributors and building depots but also small shops. All clients are attended to by professional sales representatives scattered around the country. They secure our presence in all corners of Poland and maintain good relation with our clients.

We also have partners in most of European countries and we strive to strengthen our presence outside of Europe. For more details please consult our export department which will provide you with all necessary information concerning the company profile, its products or ways of striking business relationship.

COMENSAL Limited Liability Company implements a project co-financed from European Funds:

„Internationalization of the COMENSAL Company through the implementation of activities recommended in the business strategy for the promotion of competitive products of the company on selected international markets”

Co-financing of the EU project: PLN 223 721.07

Mazowsze.
serce Polski

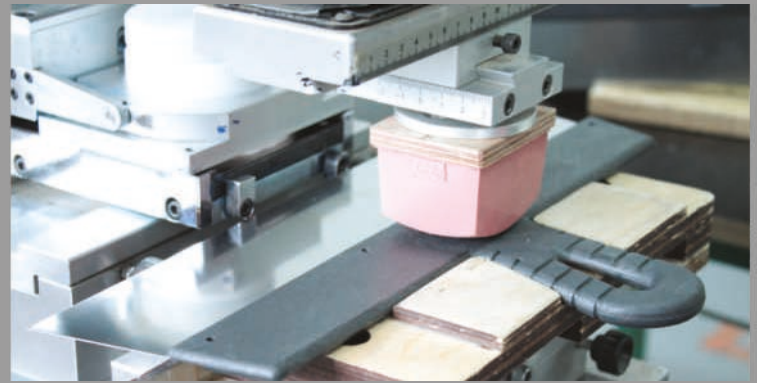

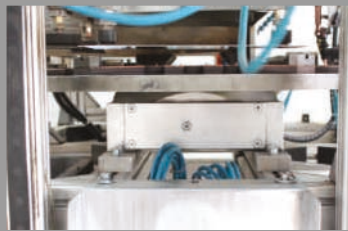

Growing our strong position on the home market does not stop us from getting onto foreign markets by exporting our tools - they can be found in almost all European countries.

We are proud that our experience is appreciated both in Poland and abroad.

COMENSAL actively participates in trade shows. We build up our image by regular participation at Eisenwarenmesse in Cologne, and recently at The Big 5 in Dubai.

We promote ourselves through cooperation with chambers of commerce in numerous countries: Uzbekistan, Morocco, Egypt, South Africa. In Poland you can see us at shows, open days and other events organised by our clients, where we actively share our knowledge and experience.

During last 20 years we have managed to equip the company with state-of-the-art machinery enabling flexible and tailored to customers' needs production, e.g. private branding, individual colours, individual design of moulds and die-cuts.

Such infrastructure allows us to increase competitiveness on the market. A number of innovative technologies and new products could be developed thanks to EU funding programmes.

In our factory, we go through all stages of production: designing, injecting plastic elements, cutting and bending metal parts, welding, coating and assembly of final products.

Machinery is adjusted to meet individual requirements of our clients and offer best Polish quality.

Check how it can work for you!

Ergonomics

While designing Bravo series we paid particular attention to ergonomics of grips - now your wrists are safe even if you work for a long time.

Top quality materials

Best materials ensure long life of our tools.

BRAVO tools were designed for professionals who work at the construction site every day.

In this range we offer not only basic tools but also specialized ones. We make every effort to provide such design and workmanship that will ensure total functionality.

We use only top-notch raw materials and monitor the quality at every production stage. As a guarantee of the highest quality we brand each and every tool - this is our signature.

BRAVO PLASTERING TROWELS

Trowels are widely used in renovation works. Plastering trowels are designed to apply and smooth lime and gypsum plasters, while notched trowels to apply adhesives.

U-shaped notches are solely for application of semi-liquid glues. Slightly different is the role of Venetian trowel – the one with rounded corners. It is to apply and finish Venetian plaster.

Infallible

Bravo plastering trowels are made of high quality stainless steel.

Choice of grips

A wide choice of grips helps to find a tool suited to individual needs.

BRAVO

SPATULAS

They are perfect for filling small cracks in walls and spreading plaster on small areas. Due to their resilience the pressure is equally distributed onto the surface of the wall ensuring smooth finishing. Rounded corners of Venetian scrapers prevent from leaving marks and drags. Joint putty knives ended with a bit are great for drywall installation while the hammer end putty knives help to get rid of lops of improperly mixed plaster.

Comfortable grip

Our scrapers always lay in hand perfectly.

On the cutting edge...

The final effect depends on the type of the blade.

Top notch

MARGIN TROWELS

Our tapered trowels stand out from the rest due to uncommon durability - the blade is made of polished, tapered steel which is attached to the handle by forging. The other ones, stainless trowels, are assembled by multi-spot welding.

Polished steel shows anti-adhesive properties while stainless steel is resistant to aggressive chemical environment.

Margin and pointing trowels are unreplaceable in application of plaster in hard to reach areas. Corner trowels are perfect for finishing internal and external corners.

Fixed forever

Our tools are unbreakable. Forged connection between the handle and the blade makes us sure of the durability of our trowels.

Choice of grips

Ergonomic, anti-slip rubber grips as well as the wooden ones provide exceptional comfort of use.
